Audiobook Promo Planning Sheet

PROMOTION • AUTHOR RESOURCE LIBRARY

A planning workbook for positioning an audiobook as its own format, coordinating audio-specific messaging, outreach, samples and campaign timing.

GET SEEN. GROW YOUR INFLUENCE. BUILD YOUR LEGACY.

How to use this resource

This guide is designed as a practical working document. Read it in sequence or move to the section that addresses your immediate need. Use the prompts to record decisions, assign actions and identify questions that require further research.

A note on platform guidance

Retailer features, metadata options, community rules and promotional policies can change. Verify current requirements with the relevant platform before making changes or launching a campaign. This guide is educational and does not guarantee rankings, reviews, sales or other outcomes.

Your working principles

Be accurate. Put reader relevance before vanity metrics. Respect platform rules and community boundaries. Keep records of decisions. Measure what matters to your goals.

Section 01

Audiobook audience

This section helps you make a clear, reader-centred decision about audiobook audience. Start by recording what is true about your book, audience and current position. Then separate evidence from assumptions before choosing an action.

What to consider

Begin with the reader's perspective. Ask what a prospective reader needs to understand, what information would help them decide, and whether the material you present is accurate and consistent. Review the surrounding context rather than treating one marketing element in isolation.

Practical sequence

• Write down the current situation and the outcome you want to improve.

• Gather the relevant book details, platform information and examples.

• Check whether each choice is accurate, appropriate and useful to the intended reader.

• Choose one manageable improvement and record who will complete it and when.

• Review the result using a meaningful signal, then document what you learned.

Working questions

What evidence supports this decision? What might confuse or discourage the reader? Which detail needs verification? What is the smallest useful next step?
